

Future State Analysis (To-Be)

i This document describes the desired future operational environment for Green Valley Medical Center following the implementation of the proposed digital transformation solution. It outlines the target business processes, system capabilities, and expected business outcomes that will support improved efficiency, data quality, and patient care.

Vision

Following the implementation of the new healthcare management platform, Green Valley Medical Center will operate through integrated digital processes that centralize patient information, streamline clinical and administrative workflows, and provide real-time access to operational data. The future environment will reduce manual work, improve collaboration across departments, and support data-driven decision-making.

Future Business Environment

Area	Future State
Patient Management	Centralized electronic patient records accessible by authorized staff.
Appointment Scheduling	Integrated scheduling with provider availability.
Clinical Documentation	Electronic Health Records (EHR) replacing paper and spreadsheets.

Laboratory	Laboratory requests and results fully integrated into patient records.
Billing	Payments linked directly to appointments and healthcare services.
Reporting	Automated operational and financial dashboards.

Target Business Capabilities

Capability	Expected Outcome
Centralized Patient Database	Single source of truth for patient information.
Electronic Health Records	Faster access to complete clinical history.
Integrated Scheduling	Reduced double bookings and administrative effort.
Integrated Billing	Improved financial accuracy and payment tracking.
Business Intelligence	Improved reporting and KPI monitoring..

Expected Benefits

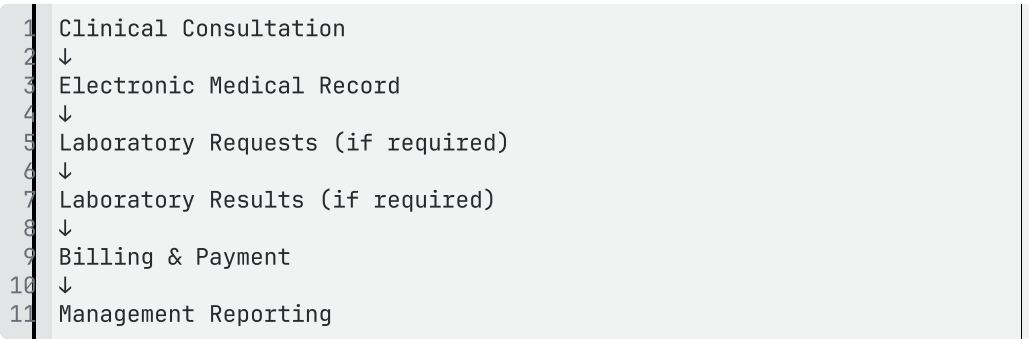

Business Benefit	Expected Impact
Reduced manual work	Lower administrative workload.
Improved data quality	Fewer duplicate and inconsistent records.
Better patient experience	Faster service and improved continuity of care.

Operational efficiency	Streamlined clinical and administrative processes.
Better decision-making	Access to reliable real-time information.

Success Indicators

Business Area	Current State	Target State
Patient Registration	Manual	Fully digital
Appointment Scheduling	Excel-based	Centralized system
Medical Records	Fragmented	Integrated EHR
Laboratory Results	Manual	Automatically linked
Reporting	Manual	Real-time dashboards
Payment Tracking	Separate processes	Fully integrated

High-Level Future Workflow

Key Assumptions

- All departments will adopt the new centralized platform.
- Healthcare providers will receive training before go-live.
- Historical patient data will be migrated to the new system.
- Role-based access control will ensure data security and GDPR compliance.

Next Steps

The future-state analysis will be used as the basis for:

- Business Process Maps (To-Be)
 - Business Requirements Document (BRD)
 - Functional Requirements
 - Solution Design
 - Data Model
 - System Configuration
-
