

Non-Functional Requirements

Security & Access Control

NFR-01 — Role-Based Access Control

The system shall restrict access to patient information and system functions according to the user's role and responsibilities.

NFR-02 — Authentication

The system shall require users to authenticate before accessing the system and its patient information.

NFR-03 — Data Protection

The system shall protect patient information against unauthorized access, modification, disclosure, or loss.

Data Privacy

NFR-04 — Patient Data Privacy

The system shall ensure that patient information is accessible only to authorized users with a legitimate business or clinical need.

Data Integrity

NFR-05 — Data Validation

The system shall validate data entered by users according to predefined formats and rules to prevent invalid or inconsistent information from being stored.

NFR-06 — Data Consistency

The system shall maintain consistent patient information across appointments, clinical records, laboratory results, and payment records.

Performance

NFR-07 — System Response Time

The system shall provide acceptable response times for standard user actions, including retrieving patient records, scheduling appointments, and accessing clinical information.

Availability

NFR-08 — System Availability

The system shall be available during the clinic's operating hours to support continuous access to essential clinical and administrative functions.

Usability

NFR-09 — User-Friendly Interface

The system shall provide an intuitive and consistent interface that allows authorized staff to perform their tasks with minimal unnecessary steps.

Auditability

NFR-10 — Audit Trail

The system shall maintain a record of significant actions performed on patient information, including the user responsible and the date and time of the action.
