

Functional Requirements

Patient Management

FR-01 — Patient Registration

The system shall allow authorized staff to register patient information, including demographic data, contact details, medical referral information, and other required registration data.

FR-02 — Patient Record History

The system shall maintain a patient record containing their previous appointments, healthcare providers, and relevant clinical history.

Appointment Management

FR-03 — Integrated Appointment Scheduling

The system shall provide an integrated appointment scheduling system that allows staff to schedule and manage patient appointments.

FR-04 — Appointment Classification

The system shall allow appointments to be visually differentiated according to department, appointment type, and follow-up status.

FR-05 — Follow-up Scheduling

The system shall allow Reception staff to schedule a follow-up appointment following a consultation when a follow-up is requested by the healthcare provider.

Referral Management

FR-06 — Referral Verification

The system shall allow Reception staff to record and verify whether a patient has the required medical referral during the check-in process

Payment Management

FR-07 — Payment Status

The system shall display whether a scheduled consultation has been paid.

Electronic Medical Records

FR-08 — Electronic Medical Record

The system shall provide an electronic medical record that can be accessed and updated by authorized healthcare providers.

FR-09 — Previous Clinical Records

The system shall allow authorized healthcare providers to view previous clinical records and previous treatment decisions recorded for the patient.

FR-10 — Laboratory Result Integration

The system shall allow laboratory results to be imported or uploaded to the patient's electronic medical record.

Laboratory Management

FR-11 — Laboratory Request Tracking

The system shall maintain a list of laboratory tests requested for each patient.

FR-12 — Laboratory Results

The system shall store and make laboratory results available within the patient's electronic medical record.

Reporting

FR-13 — Appointment Reporting

The system shall generate reports showing the number of consultations and follow-up appointments by department, including appointment no-show rates.

FR-14 — Patient Demographic Reporting

The system shall generate reports on patient demographic characteristics.

FR-15 — Revenue Reporting

The system shall generate reports showing revenue generated by each service and healthcare provider.

FR-16 — Laboratory Revenue Reporting

The system shall generate reports showing requested laboratory tests and their associated revenue.

FR-17 — Healthcare Provider Payment Reporting

The system shall generate payment reports for healthcare providers based on the services provided.

Document Management

FR-18 — Medical Document Generation

The system shall allow authorized healthcare providers to generate prescriptions, referral letters, medical certificates, and other patient documents.

Information Integration

FR-19 — Centralized Information

The system shall integrate the clinic's relevant operational and clinical information into a centralized system.
